

1

Carry out risk assessment, and ensure you have all safety data COSHH's to hand. Ensure you are familiar with the safety information. Once the area is clear of furniture, check the floor for any damage E.g dents, scratches, bubbles, splits or any form of imperfection. If there is any damage take pictures and inform/clarify with the customer prior to starting work.

2

Vacuum the entire floor thoroughly, ensuring it is free of all dust and debris to avoid any scratches being caused. Then cover the bottoms of all skirting boards in the work area with masking tape to protect from splashes. Work out the route you will work in and once started you must stick to this route.

3

Next, fill the blue bucket with warm/hot (not boiling) water and add Amtico Floor Stripper as per the instructions on the bottle. Use the green hand pad with the solution and hand strip the edges of floor as this allows you to get closer than the machine and causes less splashes.

4

Once you have stripped all edges of the floor by hand, mop the entire floor with a generous amount of the solution using a mop, avoiding any splits (if there are any). Spread solution evenly and then strip the floor using the rotary machine and green rotary pad. Do this twice or more and working in a systematic format, backwards out of your chosen route.

5

Now that the whole floor has been stripped, use a wet vacuum to remove dirty water/old seal then fill the Kentucky bucket with hot (not boiling) clean water. Mop the floor ensuring the Kentucky mop is wrung out thoroughly until only slightly damp.

6

Once the floor is dry, check for any imperfections or missed areas and repeat steps 4, 5 & 6 if necessary. When ready shake the bottle of Amtico floor dresser and pour into a clean bucket as per instruction on the bottle. Apply seal evenly to edges of the floor with a paint brush.

Amtico floor restoration

Reference Number MS101

7 The edges are now complete so next dampen the roller slightly with water and attach to the pole extender. Work out a systematic route out of the work area as you can not walk on the floor once the Amtico dresser is applied.

8 Skim the top layer of the dresser sparingly, avoid touching the bottom of the bucket. Apply evenly to the floor, ensuring no misses. Work backwards towards your assigned exit. Allow time to dry as per instructions on the bottle. Open windows and use air mover where necessary

9 Once the first coat of Amtico dresser has dried (approx 30 mins) apply a second coat using the same route and method. Once the second coat has dried (approx 30 mins) apply a third coat. Drying time is roughly 30 mins between coats but check floor before walking on it to be sure. Use the air mover if necessary.

10 Once the third coat has fully dried, check for any imperfections or misses and apply another coat of dresser if necessary. Carefully remove the masking tape and check there are no splash marks anywhere, wipe clean where necessary. Clear away all equipment.

11 Ask the customer to walk around the area and check they are happy with the work completed. If the customer addresses any issues, call your manager for advice. If the customer is satisfied, advise them not to put any furniture back on the floor and to only allow light traffic for the next 24 hours allowing the dresser to fully cure.
